### Job Application for DevOps Engineer (Docker, SME)

Greetings

### About Me

I have a knack of problem solving at the very core of my heart and have a thirst for curiosity which developed a habit of knowing how things work. Upon these I try to understand and implement things to make things better, in that process I sometimes tend to break it but eventually I stand-up to make them work flawlessly better than the previous time and in the process I try to automate every boring and repetitive tasks that I encounter, provided I have the prior knowledge for it to be solved.

### Why <EPAM> ?

As businesses and organizations tries to thrive in the age of digitization, EPAM helps organise and develop a innovative strategy and deploy relentlessly winning operations to help deliver what they promise with their Engineering DNA.

While delivering Solutions and not just services, and embracing open source tech with scalable and digitized engineering frontiers is what make this company the most appealing and unique. I would love to be a part of this amazing team to start my venture.

### Flagship Projects

Using my raspberry pi controller as a node for the Tor network and it's WiFi to act as an access point to connect to the Tor network which provides anonymity over the whole internet which has been a uprising issues these days.

As advertisements have been too notorious these days, I have made a DNS Sinkhole system deployed in a raspberry pi, which blocks almost all of the advertisements and notorious tracking domains on all my devices in my network.

### Why Me?

I have more amazing projects like these in my portfolio which deals with real world problems and solved to make things work better in a perfect harmony, where every one of them has a story behind it's development requirement. Thus, I strongly feel that I have been able to express my views as per the skills I possess, and that it greatly resonates with your company's motto which at it's heart is also meant for solving problems and facilitating solutions to makes our life better.

Sincerely,

**Subhrodip Mohanta**
